

Smart Farming is a voluntary resource efficiency programme that works with farmers to improve farm returns while enhancing the rural environment.

Headline 2018 results include:

€7,170

Average cost savings identified on the participating farms.

9%

Average greenhouse gas emissions reduction.

€8,280

Dairy farms represented the largest average cost savings of the participating farms.

€6,300

Cost savings identified on participating livestock farms.

42%

Overall savings due to addressing soil fertility.

17%

Overall savings due to good grassland management on participating farms.

DISCLAIMER: The cost savings and environmental measures identified in the assessments, represent Smart Farming's best endeavours to encourage improved resource efficiency, to improve farm incomes and enhance the environment and are dependent on the recommendations identified being acted upon.
